1 (Currently Amended). A scanner comprising:

a cold-cathode-tube light source for illuminating a surface of a document; a photoelectric conversion element for receiving light reflected from the surface

of said document and producing an image signal;

a temperature detection circuit for detecting an ambient temperature <u>at a location</u> away from the cold-cathode-tube light source; and

a control circuit for controlling a drive signal according to detected ambient temperature, said drive signal illuminating said cold-cathode light source when said document is read.

- 2. (currently amended) The scanner defined in claim 1, wherein said control circuit controls the current of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
- 3. (currently amended) The scanner defined in claim 1, wherein said control circuit controls the voltage of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
- 4. (currently amended) The scanner defined in claim 1, wherein said control circuit controls the applied time of said drive signal applied on electrodes of said cold-cathodetube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
- 5. (currently amended) The scanner defined in claim 1, wherein said control circuit controls the frequency of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.

09/695,323 (001750021AA)

6. (previously amended) A scanner comprising:

a cold-cathode-tube light source for illuminating a surface of a document;

a photoelectric conversion element for receiving light reflected from the surface

of said document and producing an image signal;

an impedance detection circuit for detecting an impedance between electrodes of said cold-cathode-tube light source; and

a control circuit for controlling a drive signal according to detected impedance information, said drive signal illuminating said cold-cathode-tube light source when said document is read.

7 (Currently Amended). A method of controlling a drive signal for illuminating a cold-cathode-tube light source comprising the steps of:

detecting an ambient temperature at a location away from the cold-cathode-

controlling a drive signal based on said detected ambient temperature, said drive signal illuminating said cold-cathode-tube light source when said document is read.

- 8. (currently amended) The method of controlling a drive signal for illuminating a cold-cathode-tube light source defined in claim 7, wherein said step of controlling a drive signal controls the current of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
- 9. (currently amended) The method of controlling a drive signal for illuminating a cold-cathode-tube light source defined in claim 7, wherein said step of controlling a drive signal controls the voltage of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.

30

- 10. (currently amended) The method of controlling a drive signal for illuminating a cold-cathode-tube light source defined in claim 7, wherein said step of controlling a drive signal controls the applied time of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
- 11. (currently amended) The method of controlling a drive signal for illuminating a cold-cathode-tube light source defined in claim 7, wherein said step of controlling a drive signal controls the frequency of said drive signal applied on electrodes of said cold-cathode-tube light source based on said <u>ambient</u> temperature <u>information</u> upon reading said document.
